

# PRODUCTION QUICKSTART

Assess opportunity for improvement & innovation

## NETBuilder

Over the last 23 years, NETbuilder have trained and placed tens of thousands of consultants at the largest companies and Global System Providers (GSIs), globally. Our product Cribl 'QUICKSTART' provides a number of services, including:

- Creating your account in Cribl.Cloud or specifying your on-premises environment.
- Completing a thorough Assessment, Planning and Implementation of your Cribl instance.
- Onboarding your first Cribl Stream routes and pipelines, from existing data sources or agents to ingestion in your target environments.

### Assessment & Planning

We will work with you to identify the most important use cases:

- Reduction in data volumes and associated costs
- Separation of concerns for data collection and analysis
- Routing to multiple analysis engines
- Transformation of observability data

We will agree on the highest impact use cases and identify the pre-requisites and dependencies for implementation.

### Data & Onboarding

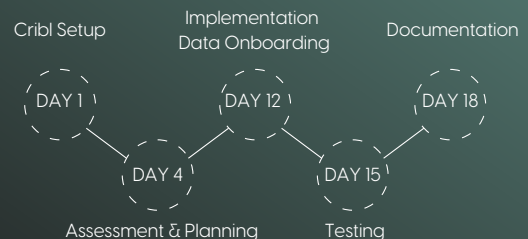

We will set up secure connectivity between Cribl Stream and your data sources. Transform and store event data making the most of your current and future needs, whilst preserving your downstream licenses.

### Implementation

Once pre-requisites and dependencies are resolved we will implement your Cribl Stream environments to the agreed logical and physical architecture, integrating to your preferred code repository.

### Engagement timelines

Whilst every customer has different dependencies and requirements, typically completion timelines are:

Contact the NETbuilder Cribl team to see how we can meet your growing observability requirements, regardless of your current vendors, providing you with:

- Complete control over all observability data
- Flexibility to use any tool without deploying new agents
- A simple way to future-proof your observability pipeline.
